

Strobel manufactures all kinds of toxin free prescription beds including: Memory Foam, Air, Water, Innerspring, Latex, Crib, Adjustable, many with Strobel's best selling Patented 'Lever Support System.'

Supple-Pedic 4500 Deluxe with Patented 'Lever Support System'

Supple-Pedic 3000 with Patented 'Lever Support System'

All our mattresses can go with adjustable bases

Strobel also offers Toxin-Free Crib Mattresses. Even new Crib Mattresses contain Boric Acid and Antimony. European scientists proved Antimony leaches through vinyl on crib mattresses, and linked it to SIDS.

**MD's and DC's Agree ...
Strobel's Patented
'Lever Support System'
is Best.**

Strobel's new Patented 'Lever Support System' is a technological breakthrough unmatched in the mattress industry. Like a Teeter-Toter, when heavier parts of your body depress one end of the levers, the other ends push up to support recessed areas such as the small of the back. The result is even all over support and comfort.

**Proven Best Back Support
90% Less Tossing and Turning
Clinically Proven Better Sleep**

Dr. Brian Anseeuw, DC, MD "As a Neurologist specializing in low back and chronic pain. ... The patented design for equal support incorporated with space age polymers, gives comfort not seen in any other mattress."

Dr. Richard W. Powell, MD "The Strobel Supple-Pedic Mattress is improving sleep quantity and depth reducing pain and increasing quality of life."

Dr. John A. Wisman, DC "The support this system provides is critical to better health."

**Don't Sleep In
Roach Killer**

and other Toxins required by flameproof bed regulation

Are you already absorbing:
Boric Acid (Roach Killer)
Antimony (Arsenic)
Formaldehyde, more?

You soon will be!

Government requires it for your one in 1.111 million mattress fire risk

There are no labeling requirements for flame retardant chemicals in your mattress. You will never know what you are sleeping in!

Doctors say Unsafe

Ask your Doctor if a prescription mattress free of toxic chemicals is right for you.

There can be more than a pound of poison in the surface of your mattress. Boric Acid (**Roach Killer**) is simply mixed as loose dust with the cotton fibers. This cotton batting also contains 2.4% Antimony (**Heavy Metal almost identical to Arsenic**). A new government report proves these chemicals leach through our sheets in large quantities. We know we absorb medicine through our skin from small patches. By assuming, without data, that we will absorb only 1/10,000's of the Boric Acid, 1/1,000's of the DBDPO, and 2/1,000's of the Antimony, that has leached to the surface and contacts our body, the government says **we will absorb a daily dose of .081 mg Boric Acid, .073 mg DBDPO, and .802 mg Antimony**, every night, for the rest of our lives.

Boric Acid causes 6,463 poisonings each year, Fatal Dose: 2g Child, 5g Adult. A known reproductive and developmental toxin, "Demonstrated injury to the gonads and to the developing fetus." "High prenatal mortality." "One human chronic exposure study showed reduced sexual activity and sperm counts.

Antimony: "Prolonged or repeated exposure may damage the liver and the heart muscle." "May cause heart to beat irregularly or stop." "Antimony tends to accumulate in the liver and gastrointestinal tract." The CDC cannot determine a safe level of Antimony exposure because: "At the lowest exposure levels tested, the adversity of the effects was considered to be serious."

"The cancer effects are cumulative. Every exposure contributes to the overall lifetime risk of developing cancer."

Mattresses must withstand this blowtorch open flame test for 70 seconds

This requires a lot of chemical in your mattress

Government Report proves known acutely toxic and cancer causing chemicals leach from flameproof beds, and are absorbed by our bodies. **Boric Acid (yes, the Roach Killer), Antimony Trioxide, Silicon, Decabromodiphenyl Oxide, Ammonium Polyphosphate, Melamine, and Formaldehyde**, are the main chemicals being used by mattress manufacturers to meet flammability standards. Formaldehyde is known to cause blindness, and concentrations as low as 10 parts per million can cause cancer and death. **Many Doctors say unsafe.** Many people do not want to absorb poisons nightly to avoid a one in 1.111 million mattress fire risk. **17,550 Americans already die from toxic exposures each year**, this number now exceeds deaths in car accidents. There are no labeling requirements for the FR chemicals in mattresses, so makers deny using chemicals. Manufacturers are free to use any untested chemicals they wish. Aside from the long term health risks, Dr. Plumlee, MD, says, many people do not tolerate treated mattresses. "And how many are intolerant who don't know why they can't sleep or feel bad?" **Fortunately, the law allows Doctors including Chiropractors to prescribe toxin free mattresses.**

Our exposure in mattresses is especially risky. We and our children will lie in these chemicals with full body and close breathing contact eight hours every night for the rest of our lives

Doctor Comments

After doing my own literature research it is quite incredible that regulators are willing to risk the health of millions of people. According to available scientific data it is NOT clear whether the levels of chemicals one is exposed to on a chronic basis by sleeping on treated mattresses is safe, especially for children and pregnant women. ... **It is another example of ignorance beyond reason ...**

Dr. Margot Mayer-Proschel, Ph.D., University of Rochester School of Medicine, Rochester, NY (Dr. Mayer-Proschel has published 18 scientific studies in neurotoxicology.)

It seems ill advised to expose hundreds of millions of people to a potential health hazard in order to protect a very few. **I am absolutely opposed to adding the proposed toxic chemicals to mattresses.** I render my opinion based on my education, training and experience in the field of occupational and environmental medicine."

Dr. Allan D. Liberman, M.D., F.A.A.E.M., Consultant in Occupational and Environmental Medicine, CENTER FOR OCCUPATIONAL & ENVIRONMENTAL MEDICINE, P.A. N. CHARLESTON, SC.

I know many chemically sensitive people who do not tolerate treated mattresses. And **how many are intolerant who don't know why they can't sleep or feel bad?**

Dr. Lawrence A. Plumlee, MD, Chemical Sensitivity Disorders Association, Dallas, TX

There is ample scientific and epidemiological evidence right now that **these chemicals can be very dangerous for humans.**

Dr. Elizabeth Vaughan, MD, Vaughan Medical Center, Greensboro, NC

It is my personal opinion (As a Physician), that, if we have doubts regarding the effects of any particular substances to human body, we cannot put anybody in that particular risk, **this is ethically unacceptable.**

Dr. Jesus R. Marante, MD, Daytop Village Inc., 92 East Broad St., Bergenfield NJ

Flameproof mattresses are not proven safe: **The Risk outweighs the benefit**

Ask your Doctor if a prescription mattress free of flame retardant chemicals is right for you.
